

DIRECT INDENT FROM THE MANUFACTURER

SHEET, COIL, STRIP & CIRCLES

The most efficient way to purchase Flat Rolled Copper is direct from the manufacturer in the exact size & specification that you require. There are certain minimum criteria that must be met in order to buy this way, but the savings can be considerable. This guide outlines the basic requirements, but we recommend that you contact our sales office to discuss your specific needs :-

Minimum Order Quantity :

This will vary depending on your exact requirements, but depending on the source there is a minimum order quantity of 500 - 1000 kgs per individual item in most cases.

Thickness Range :

Currently we can buy Flat Rolled Copper products between 0.10mm - 10.00mm thick. Depending on their capabilities, the mill may impose some restrictions on the width to thickness ratio available.

Available Widths :

The coil widths available range from 10mm - 1250mm wide depending on thickness. However, the mill may require a higher minimum quantity for widths that may leave them with excessive waste after slitting from their standard width coils.

Available Tempers : Our suppliers offer the normal range of tempers :-

Soft	1/8 Hard	¼ Hard	½ Hard
¾ Hard	Hard	Extra Hard	Spring Temper

Standards :

Our suppliers manufacture to most major international standards. If you have specific requirements outside of those standards, we can enquire with the manufacturer on your behalf.

Lead Time :

This can vary, but most items will arrive in New Zealand approximately 4 months from time of order.

"JUST IN TIME" DELIVERY SYSTEMS

Some of our clients find it advantageous to enter into agreements with Ambro Metals to stock specific items to achieve a "just in time" delivery situation. This relieves them of the need to keep large stocks on the floor, but still allows them to buy specific items from the manufacturer. If you think that this can help your business then please discuss your requirements with us and we will look at a tailored package for you.
